GOVERNMENT PUBLICATIONS OF USE TO TEACHERS OF GEOGRAPHY AND SCIENCE

Compiled by Grace S. Wright,
Office of Education

United States Government publications furnish a wealth of valuable information for teachers who wish to supplement textbook material with reliable and more detailed information. This material is particularly useful in the elementary and junior high school grades. Many phases of the social and natural sciences taught in these grades are the subject of published reports by the various governmental agencies which conduct research and investigations along those particular lines.

The publications included in this list are selected as being among those which teachers will find especially helpful. Most of them contain a number of illustrations, diagrams, or maps. Those which are highly technical have not been included.

Although this list has been limited to publications which have definite implications for the subject matter of geography and science, many of them have direct bearing on other subject-matter fields. Some will therefore be found which are helpful in teaching safety education, recreation, conservation, consumer education, and economics.

To secure any publications listed in this leaflet, unless specifically indicated otherwise, (For example, "For this apply to the Bureau of Reclamation, United States Department of the Interior, Washington, D. C.") address the Superintendent of Documents, United States Government Printing Office, Washington, D. C. Remit by coupons, postal money order, express order, or New York draft. Do not send postage stamps, mutilated coin, or foreign money. Remittance in currency will be at the sender's risk. These publications cannot be secured from the Office of Education.
